

Install WildixDAV

 The option is disabled for Android 10 phones. You can use any 3rd party CardDAV sync tool instead.

If you want to sync your enterprise phonebooks and contacts to appear in *Contacts* menu, install WildixDAV:

- Install WildixDAV from *Settings* -> **Install WildixDAV**
- Open it and enter the server name (PBX domain name or IP), user name and password
- Tick off the phonebook that you wish to sync (it's necessary to add phonebooks one by one, so repeat the steps again to add more phonebooks for sync)
- Enter the local name for the phonebook
- Check in device's *Settings* -> *Accounts* -> *WildixDAV* that the sync is ON
- Now Contacts from the phonebook soon appear in *Contacts* menu of Wildix Mobile Collaboration App
